🎯 OBJECTIVE

Front-End Web Developer with 1 year of experience using React to build responsive, user-focused web applications. Looking to contribute clean, efficient code and grow within a collaborative development team. Passionate about creating intuitive user interfaces and continuously improving development skills.

⚙ EXPERIENCE

Front-End Developer   May 2024 - June 2025

Fly Far, Dhaka, Bangladesh flyfar.tech

With one year of experience at Flyfar, I have developed scalable web applications using React, Redux, and Material UI, focusing on responsive UI and efficient state management. I collaborate with back-end teams to integrate RESTful APIs for seamless data flow. I've optimized code for maintainability, implemented CI/CD with GitHub and FTP, and written clear documentation to support team collaboration.

⚛ PROJECTS

Fly Far International V1   flyfarint.com

In Fly Far International V2, I contributed to frontend development, focusing on layout and styling, and implemented 65% of the responsive UI for optimized device display.

Fly Far Ladies V2

I developed core user modules (Login, Registration, Forgot Password) and responsive interfaces for Tour Packages (Calendar, Search with shareable link, Get, Booking), Visa Search/Get with shareable link, and User and Traveller management. I also built a fully functional, responsive Flight Search Module with shareable link integration and a modern landing page.

ERP System

In the ERP platform, I developed the CM Group management module for Fly Far International, and worked on the Tour Package Dashboard, Schedule Management, and User modules for Fly Far Ladies. I also implemented Visa Add and Get functionality for Fly Far Trips. Additionally, I contributed to 50% of the responsive interface across the ERP system.

HRM Pro

In HRM Pro, a responsive attendance and HR system, I developed key features like check-in/out and leave workflows (apply, accept, reject, withdraw). I also designed downloadable Salary PDFs, professional templates, and a functional roster module.
